SUMMARY

Senior Software Engineer with 8+ years building high-performance mobile and web applications for enterprise fintech and banking. Specialized in Flutter/Dart, now delivering full-stack systems with Flutter and .NET (EF Core) through AI-first development. Primary developer on Commercial Bank of Qatar's AI engineering initiative, and founding engineer and technical anchor on its Corporate Trade Portal, owning code reviews, releases, and architectural decisions across an 8-developer frontend team. Open-source maintainer at The Algorithms/Dart.

PROFESSIONAL EXPERIENCE

Senior Software Engineer (AI Engineering) Jun 2023 – Present
Commercial Bank of Qatar (via Linnk Group) Doha, Qatar

- Primary developer on the bank's AI engineering initiative (since Jun 2026), building greenfield internal applications that replace costly vendor solutions.
- Built the **Legal Management System** and **IPO Management System** end to end, both now in production: Flutter frontends on .NET and Entity Framework Core backends.
- Delivered both systems with an AI-first development workflow (GitHub Copilot), taking features from requirements through data model, API, and UI to production release.
- Founding frontend engineer on the Corporate Trade Portal (CTP); became the technical anchor across an 8-developer frontend team during critical delivery phases.
- Own code reviews, release management, and architectural decisions for the CTP frontend codebase while continuing to ship features daily.
- Architected scalable fintech solutions in Flutter/Dart handling complex trade finance workflows, multi-level approvals, and real-time transaction processing.
- Implemented banking-grade security protocols including biometric auth, certificate pinning, and encrypted local storage integrated with complex REST API ecosystems.
- Drove adoption of CI/CD pipelines via Azure DevOps, cutting release cycles and improving deployment reliability.

Core Maintainer & Top 5 Contributor Oct 2020 – Present
The Algorithms – Open Source Remote

- Maintain the Dart repository for one of GitHub's most popular algorithm collections (20K+ stars), reviewing PRs and enforcing efficiency standards.
- Implemented and optimized data structures and algorithms adopted by developers worldwide.
- Managed CI/CD pipelines and comprehensive unit testing suites ensuring repository reliability.

Software Development Engineer Feb 2021 – Jun 2023
PyjamaHR Bangalore, India (Remote)

- Built the PyjamaHR mobile app from scratch as the sole mobile engineer – full lifecycle from requirements through App Store/Play Store release.
- Developed a Chrome Extension (ReactJS) for direct candidate sourcing across job boards, measurably increasing recruiter throughput.
- Optimized authentication flows using Google Identity Service, significantly reducing sign-up abandonment rates.
- Delivered multiple MVPs for external clients, translating business needs into shipped products.

Software Engineer Sep 2018 – Jan 2021
InnovationM Noida, India

- Delivered mobile solutions for enterprise clients including OneAssist, EZMall, and British Council (IELTS Prep).
- Built an automated testing framework that increased code coverage and reduced production defect rates.
- Developed a POC for an audio-based social platform using Agora SDK and Flutter.

TECHNICAL SKILLS

Languages: Dart, C#, Python, TypeScript, JavaScript, Swift, Kotlin, SQL
Frameworks: Flutter, .NET, Entity Framework Core, React, Next.js, Node.js, FastAPI, SwiftUI, Firebase
Architecture: Clean Architecture, MVVM, SOLID, RESTful APIs, Isolate-based Concurrency
DevOps: CI/CD (Azure DevOps), Git, GitHub, Bitbucket, Jira, Self-hosted Agents
Mobile: App Store/Play Store Deployment, HealthKit, Agora SDK, Stripe, Biometric Auth
AI Tooling: GitHub Copilot, Claude Code, LLM Tooling (MCP Servers), Figma-to-Flutter Automation

EDUCATION

Bachelor of Technology (BTech) in Computer Science
